DIRECTORY SERVER SCHEMA REPLICATION

Abstract

A method of schema replication in a directory server including updating a schema at a replication supplier, computing a change sequence number, placing the change sequence number in an attribute on the replication supplier, initiating a replication session to a replication consumer, reading the change sequence number on the replication consumer, updating the schema on the replication consumer if the change sequence number on the replication consumer is less than the change sequence number on the replication supplier, and propagating a schema update from the replication supplier to each replication consumer.
